

## Mounting Aid „Third Hand“ for installation of 19“ components

### Do you know the problem?

Two hands hold the hub, the server, patch panel or the UPS which is to be mounted straight into the 19“ rack. How to install the screws? Now you would need a „third hand“ because disengaging is impossible!

This mounting aid supports you while installing 19“ components. It is fixed at one or two sides of the 19“ profile, to reliably hold devices while mounting into the cabinet. So one or two hands remains free for working. No second person is necessary anymore.

operation example  
delivery without components

### Product Characteristics

- Supports 19“ components while installation
- Suitable for all 19“ profiles
- One-hand operation
- Self-fixing mechanism
- Additional fixing via rugged lever for heavy parts
- Load capacity min 50 kg per pair when using the lever
- Very solid design
- Material steel sheet, galvanised
- Delivery as set of 2 (PU 2)
