

DATASHEET

Ultra High Speed HDMI Cable 8K 48Gbps eARC, M/M 5m black

General data

It supports 4K@120Hz, 8K@60Hz resolutions and 48Gbps bandwidth. It supports DSC v1.2, eARC, VRR, QMS, QFT, ALLM, and Dynamic HDR. This HDMI standard also introduces a new HDMI cable category called 48G, which certifies cables for the new, higher speeds required by these formats. 48G HDMI cables are backward compatible with older HDMI devices, while older cables are compatible with newer HDMI devices, although the full 48Gbps bandwidth is not possible without the newer cables.

Features

The maximum supported resolution is 8K@60Hz

Dynamic HDR for specifying HDR metadata on a scene-by-scene or even frame-by-frame basis

Display Stream Compression (DSC) 1.2 is used for video formats above 8K with 4:2:0 chroma subsampling

Enhanced Audio Return Channel (eARC) for object-based audio formats such as Dolby Atmos and DTS:X

Advanced refresh rate features:

Variable Refresh Rate (VRR) reduces or eliminates lag, stutter, and frame tearing for smoother motion in games

Fast Media Switching (QMS) for movies and videos eliminates the delay that can cause blank screens before content is displayed

Quick Frame Transport (QFT) reduces latency

Automatic Low Latency Mode (ALLM) automatically sets latency to the ideal minimum latency
